

RISING AFRICAN AMBASSADOR (RAA)

A Consortium of FUPRE '18 Graduands

PRESENTS

An INTENSIVE MIND

regenerating training session

TAGGED:

Furnaced to
Glitter Brazenly

with FINEST and REVERED Speakers, Disruptive Educationists,
Career Experts, Thought Leaders, Technocrats,
Global Market Influencers, Litigation Magnate
all over Sub Saharan African Nations.

Motto: Becoming Fourth Industrial Revolution Experts (B-FIRE)

Powered By: FUPRE Sceptre

RISING AFRICAN AMBASSADOR (RAA)

A Consortium of FUPRE '18 Graduands

1 Career advancement

- Self discovery
- Pitching a tent
- Network and relationships
- Gaining mastery

2 Entrepreneurship exposition

- Originality of ideas; creating impact, taking a step
- Overcoming limitations and policies
- Management efficiency
- Building a Global brand
- Elevator pitch

3 Leadership expositions

- Becoming a Thought leader
- Human management
- Project management
- Global leadership
- ?

4 Marital Life

- Self development
- Distinguishing Infatuation from affection
- Choice making
- Building an enviable home
- Parental virtues

5 Human capacity development

- Mentorship
- Trainings; books, online lessons etc
- Goal setting and actualisation
- Becoming an influencer
- Developing a Global mindset

6 Nation building - Politics in low tone

- Becoming a better citizen
- Community impact; influencing for good
- Politics participation
- Alternative political system for Nigeria, if any

7 Dominance and relevance in a dynamic world

- Becoming Pan Africans
- Understanding developed world nations
- Becoming African ambassadors
- Understanding World economy
- Understanding world policies
- Demystifying the complexity of Nigeria

8 Law

- Knowing your human right
- Civil rights
- International law

9 Health

- Improved health care
- Self medication
- Basic illness and causes

Motto: Becoming Fourth Industrial Revolution Experts (B-FIRE)

RISING
AFRICAN
AMBASSADORS

A Consortium of FUPRE '18 Grad

PRESENTS

An unprecedented awakening
Training captioned:

ENTREPRENEURSHIP

EMPHASIS ON THE 4TH/ 5TH INDUSTRIAL REVOLUTION
& THE IMPLICATIONS TO YOUNG ENTREPRENEURS

Ndlovu Khumbulani (Zimbabwean) **SPEAKER**

Ndlovu Khumbulani, 44 year old Zimbabwean national, currently working as a Public Prosecutor at the High Court of Zimbabwe, Bulawayo.

Venue:

FUPRE Grad '18 Cyber Hub

8PM

FRIDAY, 11TH JANUARY, 2019

To be part of this epoch training,
chat up the Director of Population Commission, Fupre Sceptre
(+2347063178062)

Motto: Becoming Fourth Industrial Revolution Experts (B-FIRE)

SPEAKER

ENTREPRENEURSHIP

Entrepreneurship, emphasis on the 4th/ 5th industrial revolution & the implications to young entrepreneurs

- how the context for starting companies in the 21st century have changed.
- How this calls for a holistic education from young people
- the acquisition of hard & soft skills
- the kind of education that our schools do not offer & which the young people have to hunt for through mentorship, collaboration & networking

Ndlovu Khumbulani,
44 year old Zimbabwean national.

Former High School teacher. Trained & graduated from Hillside Teachers' College in 1996. Taught at a number of secondary schools in Zimbabwe up to 2004.

2005- 2006 | attended the Judicial College of Zimbabwe & obtained a Diploma in Legal studies

2007- 2011 | worked as a Public Prosecutor at Bulawayo' s Tredgold Magistrates Court.

2013-2018 attended Midlands State University & obtained an LLB degree. (Bachelor of Laws Honours Degree)

Currently working as a Public Prosecutor at the High Court of Zimbabwe, Bulawayo.

Motto: Becoming Fourth Industrial Revolution Experts (B-FIRE)

ENTREPRENEURSHIP EMPHASIS ON THE 4TH/5TH INDUSTRIAL REVOLUTION AND THE IMPLICATION TO YOUNG ENGINEERS.

Good evening.

It's my pleasure to interact with Africa's hope- the youth & young preneurs who will drive Africa's growth & innovation. Hope I find you all well this evening

OK here is part one of my conversation with you

Part 1 - Entrepreneurship & the 4th Industrial Revolution- Preparing the Continent for the World.

"Every country in the 21st century must become an idea factory- it must develop ideas at home & take advantage of ideas generated elsewhere..." D Senor & S Singer- Start-up Nation: The Story of Israel's Economic Miracle.

Asian Tigers leveraged their growth on the back of export led growth & manufacturing (industrialization).

Can Africa do the same? Experts contend industrialisation may no longer work in Africa due to the advent of the digital age/ information revolution.

Advanced economies are getting ahead through building successful, sustainable & enduring world class businesses. US has the fungal group- Facebook, Uber, Netflix, Google & Amazon etc. & China has Alibaba, Weibo, WeChat, Didi Chuxing etc.

The company form is most successful form of wealth generation today. Entrepreneurship is the main driver of economic growth in the digital era- R Kiyosaki - Why "A" students work for "C" & "B" students work for the government - Rich Dad's Guide to Financial Education for Parents.

Africa has to develop a start-up culture & grow start up movements- young afrinetpreneurs must size the day- build tech solutions to everyday problems/ build world class companies to tackle the many challenges we face.

Edubrainiacs & Strive Masiyiwa's Facebook platform are doing well to drive change, inspire motivation & instil excellence- we must take this to our families, our schools, churches & communities so that we can build the next generation of businesses & business leaders to lead Africa to a place of more than enough.

Contributions

- I agree with you sir
- Africa has to innovate & be entrepreneurial

Part 2- HOW CAN YOUNG NETPRENEURS SET UP & THRIVE IN THE DIGITAL AGE?

Before they build, first they must learn- Josh Lannon "Small solutions big impact" www.richdad.com

Young netpreneurs must understand the season or context in which they are being called to build companies for Africa. We are in the digital age (broadband/ knowledge/gig economy- different rules now apply to starting & running businesses & we must observe & learn & implement quickly.

What is the digital economy (as opposed to the industrial or resource economy)?

This is the 4th & 5th industrial revolution which is currently taking place & changing our lives & the world of work & business in an unprecedented way(in ways we never before imagined possible!)

1st industrial revolution (1IR)- occurred in the 1780s- (was mechanical) -saw the use of steam power & development of the steam engine. NB- marked the beginning of the use of machines (industrialisation) & the decline of manual labour (muscle power)

2nd Industrial Revolution (2IR) - Eletrical - discovery of electricity, gas & the development of the combustion. 2nd industrialisation led to urbanisation & mass production

3IR - digital- proliferation of computers & the invention of the internet. It led to globalisation (outsourcing)

4IR & 5IR - Virtual & Neural Revolutions - coming on board of exponential, cutting & bleeding edge tech like AI, quantum computing, nanotech, genomics , VR & AR, block chain etc.

Implications- we are now living in a world which is becoming more & more tech driven (world of automated & autonomous services e.g. self-driving cars.

Significantly, there has been a shift from manufacturing/resources to knowledge / services economy (giving rise to the growth of service companies or platforms e.g. Facebook.

This is the era of platform businesses- businesses based on a network of connections rather than control of & acquisition of assets.

The good thing- a netpreneur does not need a lot of capital to set up (start-up): what you need is a great idea & a broadband connection.

Downside - increased competition & secondly, our schools are still teaching industrial era education which does not prepare our young people for the digital age.

The truth is the gig economy is a whole new ball game- it calls for a range of new competencies & skills

This is the digital age- the age of platform companies.

We must learn & adapt quickly to the new reality

Contribution

- Great

I believe the digital age is an advantage to young preneurs cos there are digital natives- you guys are familiar with tech.

PART 3 – FORTH AND FIFTH INDUSTRIALISATION REVOLUTIONS - IMPLICATIONS TO YOUNG NETPRENEURS

the right Education & skills are important to a 21st century preneur - doing well at school & in the content heavy & rote learning (memorisation) traditional curriculum is not enough.

21st Century Hard skills (job competencies/paper qualifications)

21c skills- digital skills- data science, AI, machine learning, IoT, cloud computing, game developing, coding (programming) etc.

Numeracy & financial literacy- understanding of money, concepts like good/bad debt, inflation v saving/ investment, exchange rates/parity/ investing.

Selling- sales are the lifeblood of a business. No one can be preneur without mastering the art of selling. Netpreneurs must particularly learn how to sell online/making a business pitch/raising capital (e-commerce), Business plan writing (Lean canvas & Design Thinking). Corporate & tax law-company registration, tax calculations, corporate governance, intellectual property protection.

Apart from Stem & financial skills, the netpreneurs needs a whole host of soft skills- ability to collaborate rather than knowledge & intelligence - is the defining competitive advantage of the gig economy.

Soft skills (abstract/behavioural skills)

- Soft skills - difficult to quantify skills that we use every day to make human connections. People skills like teamwork, collaboration, communication, leadership etc.
- Life skills - problem solving, critical thinking, focus, adaptability, self-reliance, self-awareness (self-realisation is the greatest tool for one' s growth - you become the person you believe you are (mind-set).

It takes constant work, personal growth & personal development, struggle & commitment to be a better person, better leader & great netpreneurs (our bad habits always try to pull us down - each man has to learn & conquer himself / herself before he can lead others especially the fact that our schools still teach industrial era education, that baffles me.

Contributions

- So young entrepreneurs need technical & high order skills to excel in business.

True

We must appreciate that policy changes take time to take effect. The change in the digital revolution is take place at a very fast pace. The danger is Africa is being left behind. This is why we must get together as we are doing today to alert each to what we need to do.

Just as we've been left in other revolutions, we can't let our coming generations suffer just as we have. Due to ignorance of our forefathers.

Contributions

- The floor is free for all to follow up via comments or emoji, don't be a ghost to read comments and keep still.
- It baffles me how Israel has the highest start-ups in the world, they were previously considered as the land of the desert.
- Young people must seize the opportunity & lead for Africa's development.

Israel have found the formula for success. Their young people have an entrepreneurial mind-set & business & success lifestyle which is supported by the state/government's business friendly policies which ensure that start-ups are supported & properly funded.

The entrepreneurial mind-set comes from personal growth & personal development. To succeed in business we must individually & collectively grow as a people as I attempt to demonstrate in the last part of the presentation.

Part 4 - Business & Personal growth

The big question is how do we inspire young people to succeed & thrive in the 4th industrial revolution? How do young people gain leadership, teamwork, business experience & the critical mission oriented skills to gain social solidarity & values of serving something larger than themselves? In short what is the secret of success?

Young preneurs need an Entrepreneurial mind-set + business & success lifestyle

Entrepreneurial Mind-set

- Starting & completing something worthwhile begins with our MINDSET. Mind-set - our beliefs/attitude/ world view/ thought processes or way of thinking.
- Opportunities are everywhere in the digital economy- every industry is waiting to be disrupted.
- Young preneurs must learn to see past the physical & present circumstances & see opportunity in the challenges that Africa faces. Every big business is there to solve a human problem/need. We must experiment- build tech companies to our everyday problems. Some will fail. In failure we will learn valuable lessons for progress.
- Curiosity/opportunity mind-set important- it informs our choices/decisions & subsequent actions

NB.

- If we think we are doomed we will not do anything about our continent apart from creative complaining.

- Successful people are always trying to do the "impossible" eg Elon Musk & SpaceX mission for rocket travelling to the moon.

- Each one of us must be pursuing our own unique life purpose/ mission/ game changing vision for the continent - we must be chasing something bigger than money & ourselves.

We must develop that consciousness, the pride & responsibility for our lives, our economies & our Africa

- Africa's economy will grow through innovation & entrepreneurial spirit of its young pioneering & trailblazing young people. We have enough inspiration in Osine & Asine - hope they forgive me if I got their names wrong- I am out of data (crocodile browser)- Nigeria, Ethan (Ethanman- Tanzania - I stole the title of my presentation - "...preparing the content for the world.." From an interview given by Ethan's mom & our own Afripreneur giants in Dangote & Strive Masiyiwa

Success/Business lifestyle

- When you have a mission, you must then take action (execute & attempt to bring the business idea to reality).
- Whether you succeed or not will depend on your daily routine. Everyday take steps to learn profitable skills (acquire real life/ practical business experience).
- Each small victory will give you confidence & take you closer to the big dream. No shame in starting small. The key is consistency & persistence
- Innovation (entrepreneurship) will be the key to Africa's rising.

Afrivisionaries believe-Great tech companies of the future will be from Africa -cos we have many problems & you the young people are the solution

So here is Africa- the digital world is waiting for us to raise our hand & be counted. To build our own tech giants & unicorns

Let's discuss-

What are our challenges? What is holding us back?

Ok discussions open, let the comments roll in;

CONTRIBUTIONS

- How can young entrepreneurs survive in this Buhari Regime where many companies have been shut down?
- How does entrepreneurs go about securing investments
- Many businesses and companies have closed because of all those useless policies that the Illiterate in Aso rock implemented.
- And how can young entrepreneurs get past the stage of receiving constant and repeated entrepreneurial trainings and seminars to actually getting funds and materializing their ideas???
- How can start-up companies survive in this harsh weather condition of Nigeria?
- 2018 I attended up to 15 seminars. 2019 I hope would be different.
- I think the issue with Nigeria is they don't value tech all they know is politics.
- Finance is the major problems.

TRAINER OPINION

Problems will always be there in our countries in one form or another. Like Strive Masiyiwa (Econet founder & serial preneur says - preneurs fight in the conditions they find themselves in. Some industries will close coz of tech changes/ loss of value/ markets. We need to be always innovating.

CONTRIBUTIONS

- Mostly funding is the problem, many complains that they don't have money to push their ideas.
- You are correct.
- We are in a nation where science and technology is neglected and development is expected
- Policy is a bigger problem
- Inferior recognition of our local content
- I love this point
- Good point Mr
- We criticize our own innovations, products etc

It sickens me to just imagine that other Africa countries like Ethiopia are supporting tech and Nigerians are still investing into politics when they are wealth of ideas untapped.

CONTRIBUTIONS

- We need to find the root cause of these problem he that attack the symptoms.
- That's because the government does not put up regulations for us to recognize our own.
- It's like a Hydra snake. Cut one head, and two grows to replace it.
- We need to kill the snake itself.

TRAINER OPINION

Prenuers must trust in themselves & try out all new ideas by going out & starting small. That way they will gain valuable experience. Some ventures will fail. Failure is vital for success. Let's implement, experiment all the time

Rather than attack*

CONTRIBUTIONS

- Guy, you are learned indeed !
- Checkout Innoson motors for example.
- Having kicks up and down from the government
- The way they did to *IBETO* until he has nothing to offer
- Because *Innoson* is an Igbo man, the federal government have not approved his wonderful innovations since then.
- Truth is if we want to be recognized globally we must be recognized locally first and that's what the government should work on instead of all these needless policies.

Let's learn to see opportunity in our challenges. It's not all gloom & doom. There are things we still can do- the internet means that we can grow & compete in the world outside our countries. We must not let negative things bog us down.

CONTRIBUTIONS

- And you expect me to develop an idea that will be useful to ZOO country like Nigeria in the future?
- China promotes their own product and that's y they are respected...
- HTC became the second highest selling mobile in the world last year after China made some adjustments to their law.

- There are good projects in our citadel accumulating dust.
- I have said it. And I will say again. Policy is a major problem here. Policy determines what shall be done in a long period of time and what direction the government wishes to lead a nation in terms of various factors. It's going to determine where we want to see ourselves in say 5,10,20 years in education, technology, health care, and many other areas and also how specifically we wish to accomplish these feat. It also helps in proper allocation of the required funding. Then one step forward is implementation of these policies and tracking the progress using various metrics.

QUESTION

As a graduate with little knowledge on data science, and digital skills etc. How do you propagate an idea that is related to technological development? Which you may not necessarily get a financial benefits, but would benefit the country at large.

ANSWER

if you have challenges with tech, the trick is collaboration. We must team up with other preneurs with various skills to bring an idea to reality. Business is a team sport. Collaboration is the key.

Contributions

- Duly noted
- This is the truth but who is to implement these policies...
- Sometimes I just wish there's no government so we'll have an excuse for poor development.
- They just go for conferences outside the country and still come back learning nothing
- Benefit which country?
- Policy will also help in appreciation and use of local content.
- Look at oil and gas projects. Policies implemented make it compulsory to have 30% or more of local content in projects!!! Think about that.
 - That's what policies can do when well implemented
 - You could patent it, if they don't frustrate u when trying sha
 - These laws are the policies
 - Anyway, you are from North, they will accept it and make you grow
 - Truth but u see those guys in power they are barely interested in policy concerning tech.
 - It must be oil if not them nor send.
 - Thank you sir.
 - Bringing an idea to reality might not be a big deal, making it work is blow is key.
 - That's what I mention.
 - Implementation.
 - But you cannot implement when you do not drive for the right policies in the first place. That is my point.
 - If you are from south or east, I will advise you to carry your ideas or innovations outside this country.
 - Without that you are on your own.
 - That's why we have to make them create these policies.
 - Without that, whatever we do is in vain. I assure you.
 - Truthfully said.
 - How will you make them create the policies?

- Sir you have a good point- thing is good execution/success comes about as we practice. This is what athletes do - train, train & train. Business is the same- there are no get rich quick schemes. We must try, failure, rise up & try again
- I think we should really know the right place to direct our energy.
- We should analyse this problem and decide on the right place to focus. Otherwise we would waste valuable time and resources (and sign up for inevitable failure) fighting for the right thing in the wrong directly.
- If you protest, they will shoot you ☐
- I do believe it's time we strive even though it won't be for us, we should do it for the generation after us

please guys, let's allow the facilitator's comment

- Bless u
 - Keep tribalism out of this.
 - There is a bigger picture, a bigger scope that's bigger than tribalism, that's what we should attack
 - *Direct your energy outside this country my brother.*
 - That is up to us.
 - That is why we are here.
 - How will you make them create the policies? ☐ we advocate for our governments to change & assistpreneurs. Butpreneurs are courageous- they get out there and build, starting small sometimes with no one to support -- with only their belief & tenacity
 - Guy u done start
 - I believe we do not acquire an education for nothing😊
 - Am telling you what our fathers that are there before have suffered: Innoson,Ibeto etc.....Are more innovative than Innoson?
 - If u want to travel out of d country i no dat d government will not stop u...allow us learn biko
 - And sometimes policy that helps
 - *you
 - This is what I feel sha in Nigeria our obstacles might look big sha
-
- But we are fighters and resourceful, I think if we keep pressing we'd win
 - We should not underestimate the power of a failed system lol.
 - And also the power of a great mind.
 - Don't start pls... Innoson is from d east and he is making it big... If u don't have wat to say allow us learn... Am from d east am going no were until i get d Nigeria of my dreams...
 - Remember APC will still win,who will now implemented favourable POLICIES?☐
 - They suffer so we learn from it.
 - Not react to it
 - I hear you . you all have valid complaints & grievances. But rememberpreneurs are eagles- they hunt in the storm. They chase impossible dreams. And win. We need persistence - that toughness to succeed no matter what.
 - *implement.
 - *implement.
 - This is not a matter of party politics

- Bros pls allow us learn... Remember u are educated... U should prove to d uneducated people that there is still hope for d nation
- It is government that will implement favourable policies my friend.Or is it us inside this group?
- It's hard being an eagles in this part of the world...
- I don't believe in impossibilities, I think there's always a way out
- And I believe we have no role to play in it?
- Na fowl full naija na□□□
- I love this mindset.
- I we not know how, for now, but we believe we will find the answer.
- U no nothing about policies and how dey come about my friends
- Who is d government
- We do not know now*
- He would mention issue of proper representation
- But I do think if we all collaborate to push an idea, it'll go far
- I always tell the truth with facts,if you like hate it.Oya read this:

- <https://punchng.com/272-firms-shut-one-year-man/>
- Imagine each person sharing that idea with everyone on their contact lists
- I always tell the truth with facts,if you like hate it.Oya read this:

- <https://punchng.com/272-firms-shut-one-year-man/>
- If you go into this fight with the wrong mindset, then you are definitely setting up for failure Mr.
- I don't think he wants to fight sef
- Above all; proper government, policies.... Let's allow everyone the right to believe and dream big.
- People don't no d problems of this nation... D governors and president is not d problem... It u and i... And d biggest is d legislative arm of d government
- *Truth is bitter*

Take it from me - Zimbabwe has many problems like the ones you have mentioned as taking place in Nigeria. We can't fold our hands & compete in creative complaining. We are trying new things everyday, innovating & coming with solutions to our problems without waiting for the government. Its a mindset thing- you can choose to see the negative & you will be factually right. But what I am trying to say is that the digital economic is more than what you see in the physical. Let's see past our present circumstances into the glorious future - the power of tech presented by the digital world which will enable us to solve our biggest problems. Imagine blockchain being unleashed to our election systems & governance- how we can achieve clean & smart governance. Pliz guys ,- see what lam seeing

CONTRIBUTION

- Would have said Nigeria has made us blind but we'll put on glasses to see what you're seeing
- I also admire the reactions and diverse perceptions as to why we are held down as Africans

It is time to build digital assets- that is what these platform business like Facebook are all about. You all need a great idea, a team & discipline to execute & you will have a global audience as your customer base. Come on Nigeria - you are our biggest economy & you must lead the continent out of poverty. This task falls squarely on the youth- who must understand tech & be brave to raise their hands & start world class companies

CONTRIBUTION

- I think if Nigeria as the biggest economy in Africa and most populous black nation in the world can get it right then we've halved Africa's problem if not two-third
- Sir, how do u think the blockchain can fit in to guarantee a clean government
- Like u stated in one of your presentation
- Can you also explain the ingenuity of Osine&Asine, Ethanman - Tanzania and the crocodile browser to Africa. and what the gig economy all entails

Blockchain tech as currently implemented in cryptocurrencies makes it possible for all players to see what is happening in the network. It also makes it impossible to alter transaction data due to the fact that it is not controlled by one entity. So the transparency & inalterability to me means it can have many uses in governance eg in the voters roll & procurement- making sure government funds are used effectively without wasteful expenditure

CONTRIBUTION

- Would like us to establish a fact here at the end of this workshop on where to channel our energy like my colleague stated, so that as young entrepreneurs we will be conscious of the stepwise directions to take
- We stated some problems -Poor Policies -Disregard of local content -Funding etc
- Though, if we must take a surface analysis, I will completely say that if we get the policies right we can get every other thing right, But there's a way, with or without policies. NGOs have great force in Nigeria, the government saw this and wanted to regulate their operations via a bill but the public revolted against it.
- We can have NGOs that assemble entrepreneurs and create a voice for them. We can start by having hedge funds or venture capital from successful private business men that share in the African vision, and they will project our voices beyond the continent. Just like we have Silicon Valley in US.

- America has proven that men can be bigger than governments. We just have to be coordinated, if we must go through changing policies, it will take us eons, Because the government have policies to help them with that Organization, coordination, team work, network can give us what the government can't
- Men made America policies. In the 19th century it was men like you and I that moved America to where it is now
- M not trying to be negative here but comparing investors in the US @ 1998 when google started (I think) with current Nigerian investor is like comparing an a hen to an eagle. See Nigerians are cowards and lazy. They want God to do everything for them

Would like us to establish a fact here at the end of this workshop on where to channel our energy like Jesse stated, so that as young entrepreneurs we will be conscious of the stepwise directions to take

OK. My take is look at your circumstances with fresh eyes- they are not too bad that nothing can be done. 1st establish where you want to go (your vision/mission): 2ndly - assemble a team of interested members & research your idea. 3rdly- start small where ever you. I am passionate about entrepreneurship. I read & sleep entrepreneurship. I created a startup thru which I am teaching business skills to school students while carrying on with my full time job as a lawyer. I have reached to Edubrainiacs/Fupre Graduands so I can connect with my Nigerian friends who are also interested in empowering young people, hence our talk today. Chase that big dream you have. Don't look back coz you will be a pillar of complaints like Lot's wife in the It

CONTRIBUTION

- The second industrial revolution gave way for electricity and that was first exhibited in US without government intervention
- You're talking of Martin and others, come on this is Nigeria no body is even ready to due for d policies to be established so what are we saying
- I think you should do more research on this, the govt was a part of this
- Or just imagine the govt killed d idea where would it be?
- Are u not a person we want God to do every thing for us... When last did u stand up to say no to wrong things in d society
- Americans worked with collaboration, it was the capitalism mindsets of the Americans and the magnitude of coordination they had and zeal to succeed that brought the government to take their responsibilities as a government and start fending for the masses
- Check American history, the government saw men overpowering government and they had to split the companies of this men to reduce their power and take up the responsibility of being a responsible government
- Nice speech
- But ever wondered y nobody has taken the initiative like the Americans did?
- You think they don't k or history?
- You think they don't want to do it?
- Exxon Mobil and Chevron were fraction from the multi billion oil company of John. D
- True, but u seem to forget good policies helped him there
- And I'm not been pessimistic I'm just a realist that has hopes
- What am trying to say in essence is that we can live above our challenges
- I understand you perfectly
- The country is frustrating and if not guided you can take any means just to survive
- See d only thing i see in Nigeria is self-centered ness a joined Nigeria will stand any nation... When we stop thinking of only ourselves

Thank you Nigeria. Thank Fupre Graduands & the team behind the scenes for hosting me. It was such a great pleasure to interact with all the young people who took time out to follow the conversation. Remember - the future is very very bright for Africa. (have seen it with my four eyes- I wear specs). We will link up some other time

afrinetpreneurs & afrinnovators - meet @ the top (were you belong)

God bless Nigeria. God bless Africa. Good night to you all. We sleep. Tomorrow we build

We can make a bridge from a wall, we can make a mountain from a mole hill
